REMOTE
PATIENT MONITORING

Remote patient monitoring and telemedicine are changing the landscape of healthcare and the way that providers engage with patients. Access patient health values anytime, anywhere with **CGM RPM** — a secure, remote patient monitoring solution. With **CGM RPM**, you can closely monitor your patient's chronic health conditions and use real-time health values to make data-driven care decisions that improve patient outcomes.

Maximize efficiency. Prioritize high-quality care. Stay connected.

Key Benefits

- **CGM RPM** supports more accurate, timely care with data-driven care decisions that are made from real-time patient health data.

- Patients easily take measurements — which can include blood pressure, vital signs, weight, heart rate, and blood sugar levels — from anywhere.

- By reducing re-admissions and shortening hospital stays through continuous monitoring, **CGM RPM** lowers costs while improving the quality of life for chronically ill patients.

Reduce the risk of patient mortality by up to

45%

Reduce emergency admissions by up to

20% *

Better Patient Care = Better Outcomes

Over 133 million Americans have at least one chronic condition. Providers need access to real-time health values to ensure that chronically ill patients remain stable and healthy. You can use remote patient monitoring to address and resolve potential health concerns before they develop into more serious issues.

With **CGM RPM**, chronically ill and high-risk patients won't have to make as many trips to the doctor's office or hospital, which significantly reduces their risk of infection and any costs associated with re-admission (e.g. provider time, resources, bed space).

Use remote patient monitoring to:
- Improve medication adherence.
- Ensure patient health values don't exceed pre-determined thresholds.
- Increase revenue — Medicare will reimburse up to $720 per patient, per year.

Expand Your Patient Base

Getting to the doctor can be a tremendous hurdle for many patients. With **CGM RPM**, you can eliminate geographical roadblocks for chronic care and rural patients while promoting patient wellness.

Quality Care in Real Time

Patients take measurements from home using compatible, wireless, Bluetooth-enabled devices. Measurements are sent to providers in real time via the secure **CGM HealthHub** mobile platform.

Health Devices:

- *Pulse Oximeter*
- *Thermometer*
- *Blood Pressure Monitor*
- *Glucose Meter*
- *Weight Scale*
- *Spirometer*

Explore Healthcare-at-Home

Remote patient monitoring is even more effective when used in tandem with the HIPAA-certified telemedicine solution — **CGM ELVI**. You will be alerted if a patient's health deteriorates or one of their health values exceeds a certain threshold so that you can contact them for a video consultation.

Leave the past in the rearview mirror. Explore new healthcare horizons with **CGM RPM**.
